Ransomware Unlocked

Ransomware attacks are persistent, pervasive, and have a track record of success. That means it's essential for critical business data to be immutable to threats. Read on to learn about the latest ransomware trends powering the shift from prevention tactics to a data-resilient approach.

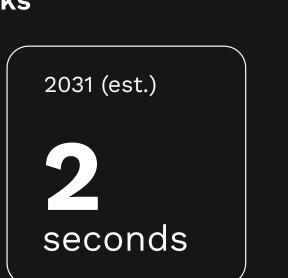

Attacks are becoming increasingly frequent, making it crucial to assume that your organization will be targeted at some point.

The Cost of Ransomware Is Rising

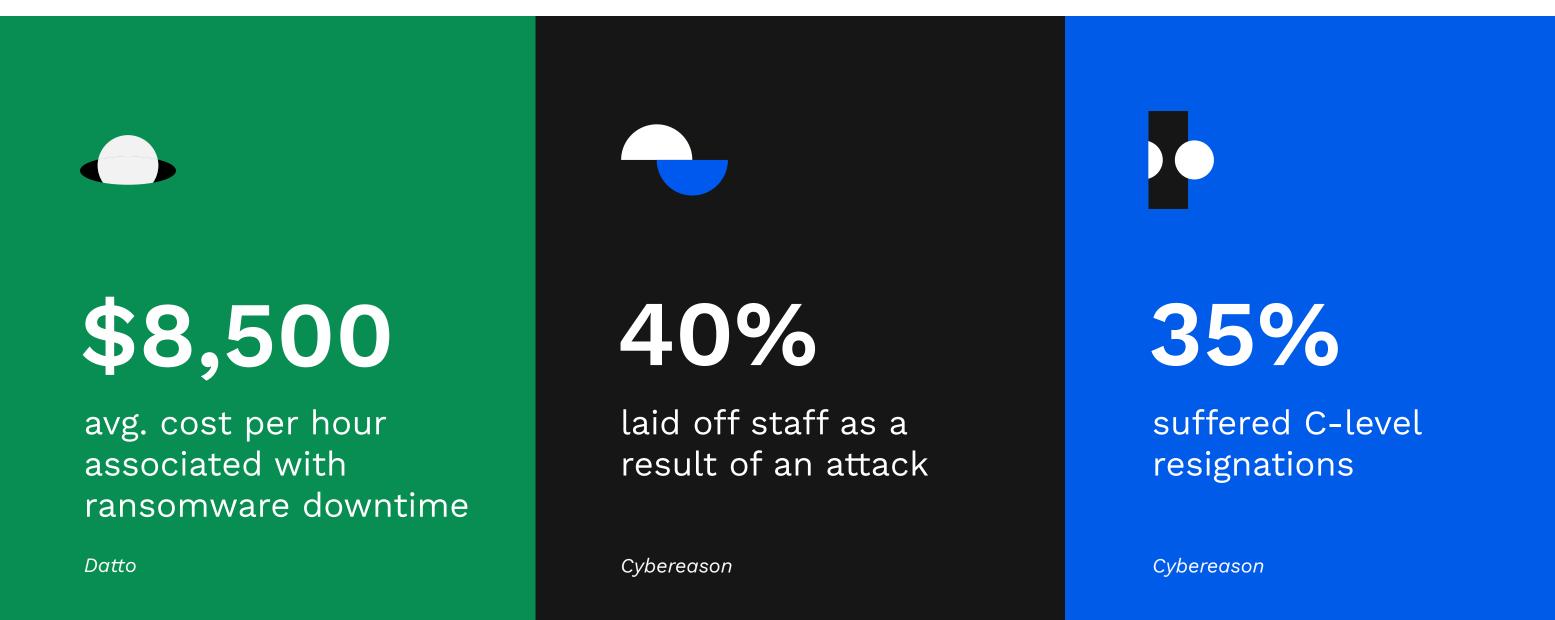

Cybersecurity Ventures predicts that by 2031, ransomware will cost victims \$265 billion annually.

The cost of downtime can be 50 times greater than the ransom demand.

Resilience in the Face of Ransomware

Panzura prevents companies from losing valuable data.

Panzura CloudFS makes cloud object storage immutable so it's impervious to ransomware. Any edits made by attackers don't destructively replace the file data, but instead create new blocks. Your actual files can never be irreversibly encrypted because they can never be overwritten.

With Panzura, infected doesn't mean affected.
